Little Goose Navigation Lock closed to recreational traffic for repairs

WALLA WALLA, Wash. – The Corps of Engineers Walla Walla District announced the closing of Little Goose Navigation Lock to recreational craft effective immediately. Damage to the upstream gate hoisting equipment has made it necessary to restrict use of the gate to extend equipment life until permanent repairs can be made. The navigation lock will remain closed to recreational traffic until repairs can be completed. Commercial users are not affected by the lock outage at this time. Meanwhile, the Corps will keep the public updated as this situation develops further.
